

Intello wins Digital Signage / VINE (“Visual Information Network”) project for Canada Post Corporation.

Montreal, October 30th, 2008 – Intello Technologies Inc., a leading provider of Internet Access Management (i-hotel) and Digital Signage solutions (i-mpact and e-studio Digital Media), announced today that they have won the deployment of the “Visual Information Network” (VINE) project for **Canada Post Corporation**, the 6th largest employer in Canada. The project spread over a 3 year phased implementation plan. In total, 61 locations, 21 Mail Processing Plants and 40 Letter Carrier Depots will be permanently installed, thus reaching 27 000 employees in 26 cities! More than 500 displays will be installed, along with all equipment and software required to deliver a complete turn-key solution.

According to Robert Marcoux, president of Intello Technologies Inc., “It’s an ideal solution for Canada Post Corporation. We are especially proud to have been chosen among 40 potential vendors. It says a lot about the quality and competitiveness of our solutions and our efforts to exceed our customers’ expectations. Canada Post has indeed recognized the value of a Canadian based software development firm.” The Intello/Dell strategic alliance provides Canada Post Corporation with an impressive array of services and equipment. The business model is probably the most cost effective anyone can find on the Digital Signage market nowadays.

For Canada Post Corporation, the final decision to choose Intello became evident throughout the decisional process. Louis Rankin, Manager for the Visual Information Network (VINE) at Canada Post Corporation added: “The Dell/Intello digital signage solution is undoubtedly the best combination of hardware, content management software and overall value that we have evaluated, thus meeting our corporate and financial objectives.”

Some of the features that helped Canada Post into in the decision process are: complete administrative rights, scalable approval levels, unlimited user access, unlimited number of displays anywhere in Canada, full preview and monitoring capability, simplicity of use, network and server security, complete hosting solution and more. **i-mpact** is a turn-key system including administrator training, graphic preparation, futures upgrades, maintenance, users/tech support and warranties.

i-mpact Digital Signage and **e-studio Digital Media** are both available as an ASP web-based solution (Application Service Provider), delivering content over the Internet as a subscription service. The implementation is simple and affordable. In fact, the ASP solution can reduce considerably the initial investment. The solution provide a low initial cost, no software to buy or install, no dedicated equipment or PC required, trouble-free maintenance and software upgrades, 24 / 7 access to powerful server and sophisticated full-featured software and 24 / 7 technical support.
